

Please note this applies to Android 12+ users only.

We have recently released an update to the app which is available to download from the Play Store. If you haven't already done so you will need to update to this latest version. When you first attempt to login you will be required to change your password (you can keep the original password but still need to go through the change process so that you are logged in to the new database).

Android have made some changes to the way that permissions are handled recently and there are a few extra steps that you will need to take to access the app.

Head to your phones settings and check the app permission for 'Other Devices'. To do this, swipe down from the top of your screen and open Settings (1), open Apps (2), select Hydrajaws Tester Android (3), select Permissions (4) and check that the permission for Nearby Devices (5) is allowed.
